TOPIC 04 · USE COPILOT TO DRAW INSIGHTS AND RECOMMENDATIONS

Lab 8 — Turn Engagement Survey Feedback into Recommendations

Maps to	LO4: use Copilot to quantify survey scores and eNPS, classify comment themes and sentiment with a human spot-check, and draft owned, measurable recommendations and an executive summary from verified findings
Duration	30 minutes
Tools	Excel · Copilot (Chat only, Allow editing) · COPILOT function (where available) · BrightPath_Engagement_Survey.xlsx
Mock data	data/BrightPath_Engagement_Survey.xlsx
Course	Microsoft 365 Copilot for Excel (C34) · v2.0

Goal

Produce three evidence-backed recommendations and a 150-word executive summary from BrightPath's June engagement pulse survey, with every number verified.

What You Will Do

BrightPath ran an anonymous pulse survey of 160 staff. You will have Copilot calculate eNPS and question averages and verify them with COUNTIFS and AVERAGE, compare departments while respecting small groups, add Theme and Sentiment columns from a fixed list and spot-check them, then use the Recommendations template and Copilot to turn verified findings into owned actions and an executive summary you approve.

What You Will Build

BrightPath_Engagement_Survey.xlsx with verified eNPS and question averages, Theme and Sentiment columns with a recorded spot-check, a Recommendations sheet with three owned, measurable actions, and an Executive_Summary

Prerequisites

- Lab 7 completed: you can verify an insight and label it OBSERVED or HYPOTHESIS.
- This lab folder's data/BrightPath_Engagement_Survey.xlsx.

Data note

Use only the supplied fictional BrightPath data or information you are authorised to process. Do not paste credentials, confidential business material or real employees' personal data into Copilot.

Steps

Step 1. Go to onedrive.com (or your SharePoint site), open or create the folder work-c34 and select Upload > Files. Upload BrightPath_Engagement_Survey.xlsx from this lab's data folder, then open it in Excel for the web or select Open in Desktop App. Confirm the title bar shows the cloud location and AutoSave is On, and that Formulas > Calculation Options is set to Automatic. Read the About_This_Data sheet before you prompt. Responses are anonymous: do not try to identify anyone, and do not report a group with fewer than 5 responses.

PROMPT / CHECK — copy and adapt

```
Table : tblSurvey (160 responses; Q1-Q6 scored 1-5; eNPS_Score 0-10; Comment)
eNPS = % promoters (9-10) - % detractors (0-6)
Templates: Recommendations | Executive_Summary
```

Step 2. Choose Chat only and ask for eNPS and the question averages. Then verify with the formulas below in an empty area of Executive_Summary (or a new Checks sheet).

PROMPT / CHECK — copy and adapt

```
Using tblSurvey, calculate the number of promoters (9-10), passives (7-8) and detractors (0-6)
on
eNPS_Score, and the eNPS. Then give the average of Q1 to Q6, lowest to highest.

CHECK:
=COUNTIFS(tblSurvey[eNPS_Score],">=9")
=COUNTIFS(tblSurvey[eNPS_Score],"<=6")
=(COUNTIFS(tblSurvey[eNPS_Score],">=9")-COUNTIFS(tblSurvey[eNPS_Score],"<=6"))/ROWS(tblSurvey
[Response_ID])*100
=AVERAGE(tblSurvey[Q3_Workload_Balance])
```

Step 3. Ask for eNPS by department with response counts. Mark any department with fewer than 10 responses as 'interpret with caution' and never report one with fewer than 5.

PROMPT / CHECK — copy and adapt

```
Show eNPS and number of responses for each Department in tblSurvey, sorted lowest eNPS first.
```

Step 4. Choose Allow editing and ask Copilot to classify comments into a fixed list. If your Excel has the COPILOT function you may use the formula option instead. Keep the original Comment column unchanged.

PROMPT / CHECK — copy and adapt

```
OPTION A (Copilot pane):
Add two columns to tblSurvey. Theme: classify each Comment into exactly one of Workload,
Career Growth,
Manager Support, Pay & Benefits, Recognition, Tools & Systems, Flexibility, or Unclear.
Sentiment:
Positive, Negative or Mixed. Leave both blank where Comment is blank. Do not change Comment.

OPTION B (COPILOT function, where available), in the first Theme cell:
=COPILOT("Classify this staff comment into exactly one theme from the list. Reply with the
theme only.",
         [@Comment], "List:", "Workload, Career Growth, Manager Support, Pay & Benefits,
Recognition,
         Tools & Systems, Flexibility, Unclear")
```

Step 5. Spot-check: read 10 classified comments yourself and count disagreements. If more than 1 in 10 is wrong, refine the prompt (for example, add an example per theme) and rerun. Then ask for theme counts and record the error rate on Prompt_Log.

PROMPT / CHECK — copy and adapt

```
Count comments by Theme and by Sentiment in tblSurvey, highest first. For the top theme,
summarise
what staff are saying in three bullet points without quoting anything that could identify a
person.

CHECK: =COUNTIF(tblSurvey[Theme],"Workload")
```

Step 6. Fill the Recommendations sheet: ask Copilot to draft three rows from your verified findings, then edit the owners, targets and dates so they are realistic. Every Evidence cell must cite numbers you verified.

PROMPT / CHECK — copy and adapt

```
Using only these verified findings: <paste eNPS, lowest question, top theme, department
results>,
draft three recommendations in the Recommendations sheet columns: Finding (OBSERVED),
Evidence,
Recommendation (a team, process or policy action - not about any individual), Owner (role),
Priority, Success KPI and target, Review date (by Dec 2026).
```

Step 7. Ask Copilot to draft the executive summary on Executive_Summary. Check every number against your checks, edit the wording, and end with your decision: Share, Revise or Hold. Log all prompts. Optionally ask Copilot in Word or PowerPoint to turn the summary into a memo or two slides.

PROMPT / CHECK — copy and adapt

```
Draft a 150-word executive summary for BrightPath's leadership from the Recommendations sheet
and the
verified results. Include eNPS, the lowest-scoring question, the top comment theme and the
three
recommendations with owners. Use plain English, no jargon, and do not claim causes.
```

Sample Prompts

Use these prompts in the Copilot pane (or adapt them). Name the table and columns, state the output, and always verify the result. The same prompts are in sample-prompts.txt in this lab folder.

#	Purpose	Prompt
1	Score	Calculate eNPS from eNPS_Score in tblSurvey: promoters 9-10, passives 7-8, detractors 0-6. Show the counts.
2	Averages	Give the average of each question Q1 to Q6, lowest to highest, with the number of responses.
3	Groups	Show eNPS and number of responses by Department, sorted lowest first.
4	Themes	Classify each Comment into exactly one theme from my list (or Unclear) in a new Theme column. Do not change Comment.
5	Sentiment	Add a Sentiment column: Positive, Negative or Mixed for each non-blank Comment.
6	COPILOT function	=COPILOT("Classify the sentiment of this comment as Positive, Negative or Mixed", [@Comment])
7	Summarise text	Summarise what staff say about Workload in three bullet points without quoting anything identifying.
8	Recommend	From these verified findings, draft three recommendations with owner, priority, success KPI and review date.
9	Executive summary	Draft a 150-word executive summary for leadership. Do not claim causes; cite the numbers.

Test It

Expected results

Promoters 39, passives 61, detractors 60 of 160; eNPS = -13.1. Lowest question Workload Balance (2.71); highest Manager Support (3.76). Human Resources has the lowest department eNPS (-36.4) from only 11 responses, so it is flagged 'interpret with caution'. 134 responses have a comment; after classification Workload is the most frequent theme (about 39 comments - AI labels can vary by a few, which is why the spot-check error rate is recorded). The Recommendations sheet has three rows, each with verified evidence, an owner role, a KPI target and a review date, and Executive_Summary ends with a Share, Revise or Hold decision.

Checkpoint

This is the final lab. Keep all eight workbooks in work-c34 as your personal reference set.

Troubleshooting

If this happens	Fix
Copilot invents new themes outside the list.	Repeat the exact list, add 'reply with one theme from the list only', and ask it to use Unclear when unsure.
The COPILOT function returns #NAME? or is missing.	It is not available on every licence or channel yet. Use Option A in the Copilot pane instead.
Copilot's eNPS uses 7-10 as promoters or averages the scores.	Restate the rule: promoters 9-10, detractors 0-6, eNPS = % promoters - % detractors. Trust your COUNTIFS.
The summary quotes a comment that could identify someone.	Remove it and ask Copilot to paraphrase themes without quotes. Anonymity comes before vividness.

Challenge

Combine Lab 7 and Lab 8: ask Copilot whether the departments with the highest attrition also have the lowest Workload Balance scores, then write one recommendation that uses both sources - labelled as a HYPOTHESIS.

Reflection

Which recommendation would you be confident defending to the HR Director, and which number makes it defensible?
