COURSE ADMINISTRATION

Welcome & Housekeeping

© Tertiary Infotech Academy Pte Ltd

About the Trainer

Dr. Alfred Ang

AI Trainer & Engineer

- PhD-qualified trainer specialising in AI, software engineering and developer tooling.
- Builds AI agents and Microsoft 365 Copilot workflows for business teams.
- Trains professionals across Singapore on practical, project-based AI skills.
- Certifications: PMP, AWS, Microsoft, CompTIA, CKA, CKAD.

linkedin.com/in/angchewhoe

github.com/alfredang

© Tertiary Infotech Academy Pte Ltd

ICE-BREAKER

Let's Know Each Other

1. Your name, organisation and role.
2. One HR, recruitment or finance report you rebuild in Excel every week or month.
3. The correction you find yourself giving Copilot (or a colleague) again and again.
4. Whether you can see the Copilot button in Excel, and on which app (Windows, Mac or web).

© Tertiary Infotech Academy Pte Ltd

HOUSEKEEPING

Ground Rules

1. Set your mobile phone to silent mode.
2. Participate actively — no question is too small.
3. Mutual respect: agree to disagree.
4. One conversation at a time.
5. Be punctual; return from breaks on time.
6. Learn by doing — try every hands-on lab.

© Tertiary Infotech Academy Pte Ltd

Access Course Materials

1. Open the C34 course page or the trainer-supplied Drive folder
2. Open the courseware links for this course
3. Download the Slides, Learner Guide and Lesson Plan
4. Open the labs folder for all 8 lab folders
5. Keep the files together as you work

Course page: tertiarycourses.com.sg/microsoft-365-copilot-for-excel.html

© Tertiary Infotech Academy Pte Ltd

CLASSROOM ACCESS

Microsoft 365 Training Accounts

Training account 1

- training1-tertiary@outlook.com
- Password issued by trainer
- Do not save in prompts or screenshots

Training account 2

- training2-tertiary@outlook.com
- Password issued by trainer
- Sign out at the end of class

Safe handling

- Use only the assigned account
- Do not change recovery settings
- Report access issues to the trainer

© Tertiary Infotech Academy Pte Ltd

SCHEDULE

Lesson Plan — 1 Day, 7.5 instructional hours

Course sequence

- Topic 1: Excel Fundamentals with Copilot (Labs 1–3)
- Topic 2: Skills and Rules (Labs 4–6)
- Topic 3: Interactive Dashboards with Copilot, Skills and Rules (Labs 7–8)

Day format

- Daily timing
  - 9:30 am - 6:30 pm (1-hour lunch; two 15-minute tea breaks; 7.5 instructional hours)
- Instructional time
  - 7.5 hours · 8 connected labs
- Learning arc
  - Concept → demonstrate → build → verify → discuss → recap

© Tertiary Infotech Academy Pte Ltd

COURSE ROADMAP

Eight Labs in Three Topics

Excel Fundamentals

- Lab 1: Data Prep & Data Quality
- Lab 2: Formulas & XLOOKUP
- Lab 3: PivotTables, PivotCharts & Visuals

Skills & Rules

- Lab 4: Workbook Rules & Personalisation
- Lab 5: Built-in Skills: Visual Design
- Lab 6: Custom Skills: Pareto Chart

Interactive Dashboard

- Lab 7: Interactive Dashboard
- Lab 8: Dashboard Skill, Refresh & Share

© Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL ACHIEVE

Learning Outcomes

1

Excel Fundamentals

Use Copilot in Excel's Chat only, Plan and Allow editing modes to prepare and clean data, write formulas and XLOOKUPs, and build PivotTables, PivotCharts and charts, verifying every result.

2

Skills & Rules

Make Copilot's work consistent and repeatable with personalisation, workbook rules (.Rules), built-in skills and custom skills that you create with Copilot.

3

Interactive Dashboard

Combine Copilot, rules and skills to build a highly visual, interactive and refreshable dashboard, and verify and share it responsibly.

© Tertiary Infotech Academy Pte Ltd

LEARNING APPROACH

How You'll Learn

1. Trainer demonstrates the concept
2. You build it yourself in the hands-on lab
3. Verify with the lab's 'Test it' step
4. Discuss and troubleshoot together
5. Recap against the learning outcomes

© Tertiary Infotech Academy Pte Ltd

CORE CONCEPTS

Copilot in Excel for HR and Recruitment

© Tertiary Infotech Academy Pte Ltd

OVERVIEW

The BrightPath Scenario

1

BrightPath Talent Solutions

A fictional Singapore recruitment, flexible-staffing and HR-outsourcing firm.

2

Recruitment data

Candidate pipeline, job requisitions, monthly funnel metrics, job postings and client orders.

3

Business and workforce data

HR-outsourcing client growth data and internal workforce data.

4

Your role

HR / talent analyst who uses Copilot, rules and skills to turn these workbooks into verified dashboards.

© Tertiary Infotech Academy Pte Ltd

TOPIC 01

Excel Fundamentals with Copilot

Chat only, Plan and Allow editing · setup, data sources and the model picker · data prep and automated cleanup · formulas and XLOOKUP · PivotTables, PivotCharts and charts

© Tertiary Infotech Academy Pte Ltd

C34 OPERATING PRINCIPLE

Copilot does the work. Rules and skills make it repeatable. Your checks make it trustworthy.

Describe the task precisely, write the standards down once, and reconcile every number before it reaches a people decision.

© Tertiary Infotech Academy Pte Ltd

Ten Things Copilot in Excel Does Now

1. **Allow editing, Plan, Chat only**
   Three ways to work with Copilot - Lab 1.

2. **Analyse the data**
   Find patterns and answer questions - Labs 1, 7.

3. **Bring in other data**
   Attach another workbook as context - Lab 2 challenge.

4. **Model selector**
   Compare models on a hard question - Lab 1.

5. **Automated cleanup**
   Tidy messy data with Clean Data - Lab 4.

6. **Personalisation**
   Preferences that follow you - Lab 4.

© Tertiary Infotech Academy Pte Ltd

Ten Things Copilot in Excel Does Now (cont.)

7 Workbook rules
Standards stored in the file (.Rules) - Labs 4, 7, 8.

8 Write formulas
Describe the calculation you need - Lab 2.

9 Create new spreadsheets
Start from research or a blank workbook - Lab 3 challenge.

10 Skills
Make the work repeatable - Labs 5, 6, 8.

© Tertiary Infotech Academy Pte Ltd

Key Concepts — Excel Fundamentals with Copilot

1

Pick the right mode

Chat only answers without touching the sheet. Plan shows its steps first. Allow editing makes the change.

2

Keep or undo every change

After Copilot edits, select Done to keep it or Undo to reverse it. Version history is your safety net.

3

Turn your data into a table

Ask Copilot to format the range as a named table, e.g. tblApplications. Copilot gives better answers on tables.

4

Name the columns in your prompt

'Count hires by Source in tblApplications for 2026' beats 'analyse my data'.

5

Describe the formula in plain English

'Look up Recruiter_Name from tblRecruiters' - Copilot writes the XLOOKUP and explains it.

6

Check every number

Compare Copilot's answer with your own COUNTIFS, SUMIFS or PivotTable total.

© Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Excel Fundamentals with Copilot

Lab 1

- **Data Prep & Data Quality**

– Explore and Question Recruitment Pipeline Data

Lab 2

- **Formulas & XLOOKUP**

– Generate and Verify Formula Columns and XLOOKUPs for Job Requisitions

Lab 3

- **PivotTables, PivotCharts & Visuals**

– Build PivotTables, PivotCharts and Recruitment Charts with Copilot

© Tertiary Infotech Academy Pte Ltd

What Is Data Prep?

WHAT IT IS

- Turning a raw export into a clean table: one header row, one record per row, one kind of value per column.

WHY IT MATTERS

- Formulas, PivotTables, charts and Copilot only stay correct on a tidy table.

CHECK IT

- Can you say in one sentence what one row means?

© Tertiary Infotech Academy Pte Ltd

Try It in Excel — What Is Data Prep?

DO IT IN EXCEL

- Click in the data and press Ctrl+T (Format as Table).
- Table Design > Table Name: tblApplications.
- One header row, no blank rows, no merged cells.
- Grain: one row = one application.

THEN CHECK

- New rows join the table automatically.
- Every column holds one kind of value.

© Tertiary Infotech Academy Pte Ltd

Why Data Quality Matters

WHAT IT IS

- Good data is complete, consistent, unique and valid. Common problems: duplicates, spelling variants, text numbers.

WHY IT MATTERS

- Every count and chart inherits the errors: 'Linked In' and 'LinkedIn' become two sources.

CHECK IT

- Profile before you analyse: rows vs unique IDs, distinct values, data types.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Why Data Quality Matters

ASK COPILOT

- Are any Application_IDs repeated in tblApplications?
- List every Source value with a count of each.
- Or open the Source filter drop-down to see the variants.

THEN CHECK

- 242 rows vs 240 unique IDs = 2 duplicates.
- Fix in a helper column; keep the original.

© Tertiary Infotech Academy Pte Ltd

Chat Only, Plan and Allow Editing

WHAT IT IS

- Three modes: Chat only answers, Plan shows its steps first, Allow editing makes the change.

WHY IT MATTERS

- Copilot can edit your workbook. Picking the mode first keeps you in control.

CHECK IT

- After every edit, look at the highlighted changes, then select Done or Undo.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Chat Only, Plan and Allow Editing

TYPE THIS IN COPILOT

- Chat only: What does one row in tblApplications represent?
- Plan: Flag duplicate Application_IDs and standardise Source. Show me the steps first.
- Allow editing: Format this range as a table named tblApplications.

THEN CHECK

- Chat only left the sheet unchanged.
- Plan waited for your approval.
- Done keeps a change; Undo removes it.

© Tertiary Infotech Academy Pte Ltd

The Copilot Pane — What Each Control Does

1

Copilot button or floating icon

Home > Copilot, or the floating icon at the bottom right. Right-click the icon to dock it or move it to the ribbon.

2

Model picker (top)

Auto picks the model for each task. Or choose a Claude (Anthropic) or GPT (OpenAI) model for this session.

3

Mode (above the prompt box)

Chat only answers. Plan shows its steps and waits. Allow editing (the default) makes the change.

4

+ Add work content

Attach a file, choose plugins & skills, create workbook rules, or switch web and work sources.

5

Settings (...)

Personalization for your preferences; Manage plugins & skills to turn skills on or off.

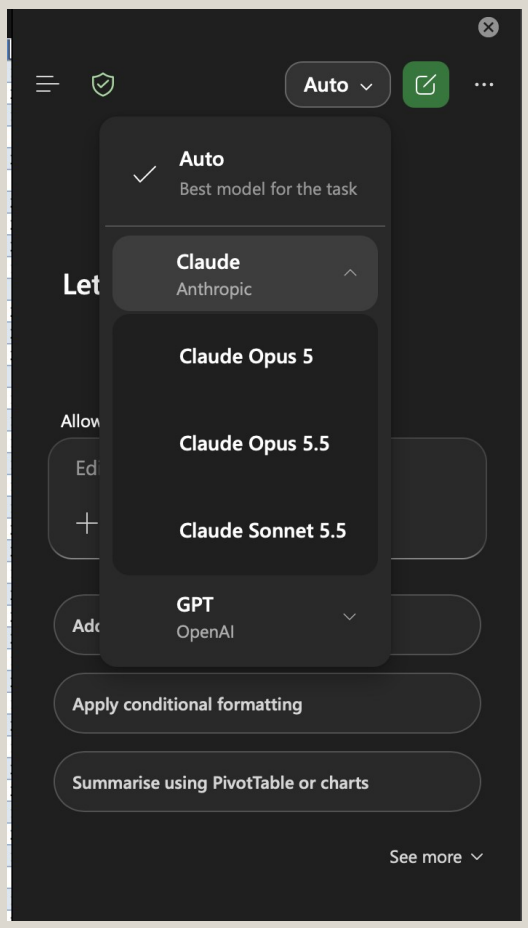

6

New chat and history

Start a new chat when you switch task or change a setting; reopen earlier chats from history.

© Tertiary Infotech Academy Pte Ltd

Choosing a Model

1 **Auto (recommended)**
Copilot chooses the model for each task. Start here.

2 **Claude - Anthropic**
e.g. Claude Opus and Sonnet models. Deep reasoning models suit complex analysis.

3 **GPT - OpenAI**
OpenAI's GPT models.

4 **Which one?**
Try another model if an answer is weak. Premium models have fair-use limits. Always check the result.

© Tertiary Infotech Academy Pte Ltd

Setup, Data Sources and the Model Picker

WHAT IT IS

- Copilot needs an eligible licence and a current Excel. The + menu adds files and sources; the top menu picks the model.

WHY IT MATTERS

- Most 'Copilot is missing' problems are setup. Naming the right file beats letting Copilot guess.

CHECK IT

- Leave the model on Auto. When you compare models, check both against the same Checks sheet.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Setup, Data Sources and the Model Picker

SET IT UP

- Save as .xlsx locally; Calculation Options = Automatic.
- + > attach a file, or type / and the file name.
- Model picker (top): Auto, or a Claude or GPT model.
- New chat, then ask the same question to compare.

THEN CHECK

- The Copilot button is active, not grey.
- Both models agree with the Checks sheet.

© Tertiary Infotech Academy Pte Ltd

Cleaning Data with Copilot

WHAT IT IS

- Ask Copilot to make the table, list the problems and fix them in a helper column. Data > Clean Data fixes spaces and capitals.

WHY IT MATTERS

- Copilot finds problems in seconds - but cleanup fixes typing, not meaning.

CHECK IT

- Count rows and unique IDs before and after. Flag problems before you fix them.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Cleaning Data with Copilot

TYPE THIS IN COPILOT

- Format this range as a table with headers and name it tblApplications.
- How many rows and how many unique Application_IDs are there?
- List the distinct values in Source and flag any spelling variants.

THEN CHECK

- 242 rows but 240 unique IDs = 2 duplicates found.
- No row deleted after the clean-up.

© Tertiary Infotech Academy Pte Ltd

Explore and Question Recruitment Pipeline Data

LAB 1

You are a talent analyst at BrightPath Talent Solutions, a fictional Singapore recruitment and staffing firm. You will meet Copilot's three modes on a real task, asking in plain English: Allow editing turns the H1 2026 pipeline export into a named table, Chat only describes it without touching the sheet, and Plan shows you its steps before it fixes duplicate IDs and inconsistent Source names. You will then ask which source brings in the most hires, have Copilot add a Checks sheet to confirm the answer, compare two AI models, and highlight, sort and filter the pipeline.

You'll build

BrightPath_Candidate_Pipeline.xlsx in your work-c34 folder with table tblApplications, a Source_Clean column, duplicate IDs and Hired rows highlighted, a Checks sheet that confirms the hire counts and a filled Prompt_Log

1 Create the table	2 Describe	3 Find & fix issues	4 Ask & check	5 Highlight, sort, filter

Tools: Excel for Microsoft 365 (desktop) · Copilot (Chat only, Plan, Allow editing, model picker) · BrightPath_Candidate_Pipeline.xlsx

© Tertiary Infotech Academy Pte Ltd

Sample Prompts — Lab 1

	PROMPT	WHAT IT DOES
1	**Summary:** Give me a quick summary of this pipeline data in five bullet points.	Copilot reads the whole table and sums it up in five short points - a quick first look before you dig in.
2	**Question:** Which sector received the most applications?	Counts the applications for each sector and names the top one (Technology).
3	**Question:** Which recruiter has the most candidates at the Offer stage?	Counts the candidates at the Offer stage for each recruiter, so you see whose candidates are closest to a hire.
4	**Highlight:** Highlight the candidates with an interview score of 5 in light blue.	Colours the rows with the top interview score so the strongest candidates stand out.
5	**Insight:** What's interesting about this data? Give me three observations with the numbers behind them.	Copilot looks for patterns - e.g. which sources or sectors convert best - and backs each one with numbers you can check.

© Tertiary Infotech Academy Pte Ltd

Check Your Results — Lab 1

1

Rows in tblApplications

242 rows, 240 unique Application_IDs

2

Duplicate IDs (orange)

APP-0018 and APP-0020 - 4 orange cells: 2 near the top, 2 in the last rows

3

Source_Clean

7 sources - 3 'Linked In' and 2 'JobStreet' (extra space) fixed

4

Hires (Checks sheet)

22 in total; LinkedIn has the most (8)

5

Two models

Both name LinkedIn as the top source, matching the Checks sheet

6

Technology + Interview filter

9 rows; all 242 back after Data > Clear

© Tertiary Infotech Academy Pte Ltd

What Is a Formula in Excel?

WHAT IT IS

- A formula starts with = and calculates from cells and functions. In a table, use names: =[@Filled]/[@Openings].

WHY IT MATTERS

- Formulas are auditable and recalculate when the data changes. A typed number does neither.

CHECK IT

- Click any result and read its formula in the formula bar.

© Tertiary Infotech Academy Pte Ltd

Try It in Excel — What Is a Formula in Excel?

TRY IN EXCEL

- Fill rate: =[@Filled]/[@Openings]
- Open or closed: =IF([@Close_Date]="","Open","Closed")
- Count: =COUNTIFS(tblRequisitions[Status],"Open")

THEN CHECK

- Typed once, it fills the whole column.
- No typed numbers in calculated columns.

© Tertiary Infotech Academy Pte Ltd

Table References: What Does @ Mean?

WHAT IT IS

- In a table, @ means 'this row'. [@Filled] is the Filled value in the same row as the formula.

WHY IT MATTERS

- One formula fills every row, reads like the rule, and keeps working when rows are added or sorted.

CHECK IT

- @ = this row. No @ = the whole column.

© Tertiary Infotech Academy Pte Ltd

Try It in Excel — Table References: What Does @ Mean?

READ IT LIKE THIS

- =[@Filled]/[@Openings] - this row's Filled / this row's Openings
- Same as =G3/F3 on row 3, but readable and safe to sort
- =SUM(tblRequisitions[Filled]) - the whole Filled column

THEN CHECK

- You only see @ inside an Excel table.
- =SUM([@Filled]) adds just one row - drop the @ for totals.

© Tertiary Infotech Academy Pte Ltd

Reading Excel References: !, :, $ and [@[...]]

WHAT IT IS

- ! = on that sheet. : = a range. $ = locked when copied. [@[Column]] = this row's value, same as [@Column].

WHY IT MATTERS

- Copilot's replies and formulas use them all - reading them shows which cells changed and where a formula looks.

CHECK IT

- Does the reference point at the right sheet, the right range and the right fixed input?

© Tertiary Infotech Academy Pte Ltd

Try It in Excel — Reading Excel References: !, :, $ and [@[...]]

READ IT LIKE THIS

- Requisitions!P2:P61 - cells P2 to P61 on the Requisitions sheet
- Control!$B$1 - cell B1 on the Control sheet, locked with $
- [@[Fee_Rate]] - this row's Fee_Rate, same as [@Fee_Rate]

THEN CHECK

- Press F4 while editing a reference to add or remove $.
- Sheet names with spaces need quotes: 'Dash Data'!B2.

© Tertiary Infotech Academy Pte Ltd

Reading a Formula: IF, AND and @

THE FORMULA, PIECE BY PIECE

- =IF(AND([@Status]="Open", [@[Days_Open]]>45), "Overdue", "")
- [@Status]="Open" - is this row's Status Open?
- [@[Days_Open]]>45 - has this row been open more than 45 days?
- AND(test1, test2) - TRUE only if both are TRUE
- IF(test, "Overdue", "") - show Overdue, otherwise leave blank

WHY THE @?

- @ = this row: each requisition is checked on its own row.
- Without @, [Status] means all 60 values at once - error or wrong result.
- [@Status] and [@[Days_Open]] mean the same kind of thing.
- Check: 13 rows show Overdue.

© Tertiary Infotech Academy Pte Ltd

What Is XLOOKUP?

WHAT IT IS

- XLOOKUP finds a key in one table and returns the matching value from another table.

WHY IT MATTERS

- Joins data by a shared ID instead of copy-paste - and updates when either table changes. Simpler and safer than VLOOKUP.

CHECK IT

- Count 'Not found' results: each one is a missing or mistyped key.

© Tertiary Infotech Academy Pte Ltd

Try It in Excel — What Is XLOOKUP?

THE SYNTAX

- =XLOOKUP(lookup_value, lookup_array, return_array, [if_not_found])
- =XLOOKUP([@Recruiter_ID], tblRecruiters[Recruiter_ID], tblRecruiters[Recruiter_Name], "Not found")
- =COUNTIF(tblRequisitions[Recruiter_Name], "Not found")

THEN CHECK

- JOB-2002: R05 returns Siti Hamid.
- Keys must match exactly - watch extra spaces.

© Tertiary Infotech Academy Pte Ltd

Writing Formulas and XLOOKUPs with Copilot

WHAT IT IS

- Describe the calculation in plain English and Copilot writes the formula or XLOOKUP, and explains it.

WHY IT MATTERS

- A formula can run without errors and still be wrong, e.g. a monthly instead of an annual salary.

CHECK IT

- Work out one row by hand and compare the column total with your own formula.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Writing Formulas and XLOOKUPs with Copilot

TYPE THIS IN COPILOT

- Add Recruiter_Name by looking it up from tblRecruiters using Recruiter_ID.
- Add Est_Fee = Filled x Monthly_Salary_Budget x 12 x Fee_Rate, then a total row.
- Explain the formula in the selected cell.

THEN CHECK

- JOB-2002: 4 x S$4,900 x 12 x 25% = S$58,800.
- No 'Not found' in the lookup column.

© Tertiary Infotech Academy Pte Ltd

Generate and Verify Formula Columns and XLOOKUPs for Job Requisitions

LAB 2

BrightPath's permanent-recruitment desk tracks 60 client job orders. You will ask Copilot to add an XLOOKUP for the recruiter's name and four calculated columns written from business rules, ask it to explain each formula, hand-check one requisition and reconcile column totals to independent formulas on the Control sheet. You will then ask Copilot which recruiter generated the most estimated fees and verify the answer.

You'll build

BrightPath_Job_Requisitions.xlsx with Recruiter_Name, Days_Open, Fill_Rate, Est_Fee and Ageing_Flag columns in tblRequisitions, overdue requisitions highlighted, and a Control sheet that reconciles the totals

1 Lookup	2 Days open	3 Fill rate & fee	4 Ageing flag	5 Reconcile

Tools: Excel · Copilot (Allow editing, Chat only) · XLOOKUP · structured references · BrightPath_Job_Requisitions.xlsx

© Tertiary Infotech Academy Pte Ltd

Sample Prompts — Lab 2

	PROMPT	WHAT IT DOES
1	**Lookup:** Add a column Recruiter_Name that looks up Recruiter_Name from tblRecruiters using Recruiter_ID with XLOOKUP. Return "Not found" if missing.	Writes e.g. =XLOOKUP([@Recruiter_ID], tblRecruiters[Recruiter_ID], tblRecruiters[Recruiter_Name], "Not found"): finds this row's ID in tblRecruiters and returns the name.
2	**Duration:** Add a column Days_Open: if Close_Date is blank use Control!B1 minus Open_Date, otherwise Close_Date minus Open_Date.	Writes e.g. =IF([@Close_Date]="", Control!$B$1-[@Open_Date], [@Close_Date]-[@Open_Date]): still open? count to the report date; closed? count to the close date.
3	**Ratio:** Add a column Fill_Rate = Filled / Openings formatted as a percentage.	Writes =[@Filled]/[@Openings]: this row's filled positions divided by its openings, e.g. 4 of 4 = 100%.
4	**Business rule:** Add a column Est_Fee = Filled x Monthly_Salary_Budget x 12 x Fee_Rate, formatted as S$ with no decimals.	Writes =[@Filled]*[@Monthly_Salary_Budget]*12*[@Fee_Rate]: monthly salary x 12 = annual salary, x fee rate, x positions filled. JOB-2002: 4 x S$4,900 x 12 x 25% = S$58,800.
5	**Flag:** Add a column Ageing_Flag that shows "Overdue" when Status is Open and Days_Open > 45, otherwise blank.	Writes =IF(AND([@Status]="Open", [@Days_Open]>45), "Overdue", ""): Overdue only when both tests are true; otherwise the cell stays blank.

© Tertiary Infotech Academy Pte Ltd

Check Your Results — Lab 2

1

Total estimated fees (Control B3 and B4)

Both S$1,030,512

2

Average days to fill (B5)

34.6 days (29 filled requisitions)

3

Overdue requisitions (B6 and B7)

Both 13

4

Sample row JOB-2002

Est_Fee S$58,800, Days_Open 36

5

Recruiter_Name lookup

Every row has a name - no "Not found"

6

Top recruiter by fees

Aisha Rahman - S$221,760

© Tertiary Infotech Academy Pte Ltd

What Are PivotTables and PivotCharts?

WHAT IT IS

- A PivotTable summarises a table by dragging fields into Rows, Columns, Values and Filters. A PivotChart charts it.

WHY IT MATTERS

- Answers 'how many by X' in seconds, without formulas - and you can reshape it any time.

CHECK IT

- Is the value Sum, Count or Average? Did you Refresh after the data changed?

© Tertiary Infotech Academy Pte Ltd

Try It in Excel — What Are PivotTables and PivotCharts?

DO IT IN EXCEL

- Click in tblMonthly > Insert > PivotTable > New Worksheet.
- Rows: Month_Label · Values: Sum of Hires.
- PivotTable Analyze > PivotChart > Line.
- Data > Refresh All after the data changes.

THEN CHECK

- Grand total = SUM(tblMonthly[Hires]).
- The chart follows the PivotTable.

© Tertiary Infotech Academy Pte Ltd

PivotTables and PivotCharts from a Prompt

WHAT IT IS

- Describe the PivotTable and the PivotChart you want, and Copilot builds both, linked to your data.

WHY IT MATTERS

- The PivotTable total lets you check the chart, and both update when the data grows.

CHECK IT

- The PivotTable grand total equals a SUM or SUMIFS of the source column.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — PivotTables and PivotCharts from a Prompt

TYPE THIS IN COPILOT

- Create a PivotTable from tblMonthly with Month_Label in rows and Sum of Hires.
- Create a line PivotChart of total hires by month from it, with data labels.
- Put both on a new sheet named Pivot_Trend.

THEN CHECK

- Grand total = SUM(tblMonthly[Hires]).
- The chart is a PivotChart, not a pasted picture.

© Tertiary Infotech Academy Pte Ltd

Choosing and Refining Charts

WHAT IT IS

- Pick the chart from the question, then refine it with one follow-up prompt per change.

WHY IT MATTERS

- The wrong chart type misleads. A finding-style title tells leaders what to see.

CHECK IT

- Could someone get the main message from the title in 5 seconds?

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Choosing and Refining Charts

TYPE THIS IN COPILOT

- Create a bar chart of 2026 hires by Sector, sorted high to low.
- Change the title to: Technology led hiring in H1 2026.
- Put Cost_per_Hire on a secondary axis as a line, formatted as S$.

THEN CHECK

- Axes labelled with units.
- Values still match the PivotTable.

© Tertiary Infotech Academy Pte Ltd

Build PivotTables, PivotCharts and Recruitment Charts with Copilot

LAB 3

BrightPath's leadership wants to see how hiring is moving and which sectors and sourcing channels perform best. You will ask Copilot to build PivotTables and PivotCharts from 18 months of funnel metrics and a sourcing summary, choose each chart from the question it answers, refine titles, labels, sort order and axes with follow-up prompts, and reconcile every chart to an independent SUMIFS check.

You'll build

BrightPath_Recruitment_Metrics.xlsx with PivotTables and four refined charts on the Charts sheet: a monthly hires line PivotChart, a sorted 2026 hires-by-sector bar PivotChart, a 2026 recruitment funnel and a hire-rate vs cost-per-hire combo chart

1 Pivot + line PivotChart	2 Sector PivotChart	3 Funnel	4 Source combo	5 Refine & check

Tools: Excel · Copilot (Allow editing) · PivotTables, PivotCharts · line, bar, funnel and combo charts · BrightPath_Recruitment_Metrics.xlsx

© Tertiary Infotech Academy Pte Ltd

Sample Prompts — Lab 3

	PROMPT	WHAT IT DOES
1	**PivotTable:** Create a PivotTable from tblMonthly with Month_Label in rows, Sector in columns and Sum of Hires as values.	Builds a summary with no formulas: one row per month, one column per sector, each cell the total hires. Check the grand total against =SUM(tblMonthly[Hires]).
2	**PivotChart:** Create a line PivotChart from the Pivot_Trend PivotTable showing total hires by month. Show data labels and gridlines.	Draws a line chart linked to the PivotTable, so it changes when the PivotTable is filtered or refreshed.
3	**Bar chart:** Create a bar chart of 2026 hires by Sector, sorted from highest to lowest.	Totals 2026 hires for each sector and draws bars, longest first, so the top sector stands out.
4	**Funnel:** Create a funnel chart of 2026 Applications, Screened, Interviews, Offers and Hires with data labels.	Shows how many candidates remain at each stage, from applications down to hires, so you see where people drop out.
5	**Combo chart:** Create a combo chart of Hire_Rate as columns and Cost_per_Hire as a line on a secondary axis.	Puts two measures with different units on one chart: hire rate (%) as columns on the left axis, cost per hire (S$) as a line on the right axis.

© Tertiary Infotech Academy Pte Ltd

Check Your Results — Lab 3

1. **Total hires (Pivot_Trend)**
   1,065 = SUM(tblMonthly[Hires])

2. **Peak month**
   2025-11 with 68 hires

3. **2026 hires by sector**
   Technology first (84); Pivot total 361

4. **Funnel**
   6,616 > 3,229 > 1,385 > 495 > 361

5. **Best source**
   Referral: highest hire rate (8.7%); MyCareersFuture: lowest cost per hire (S$126)

6. **Charts sheet**
   2 PivotCharts + funnel + combo in a 2 x 2 grid (A1:Q37), clean style, finding-style titles, labelled axes and alt text

© Tertiary Infotech Academy Pte Ltd

TOPIC RECAP

Recap - Excel Fundamentals with Copilot

1. LO1 · Modes: Chat only to ask, Plan to review the steps, Allow editing to change - then Done or Undo.

2. LO1 · Data prep: Named tables, duplicates and spelling variants flagged and fixed, row counts unchanged.

3. LO1 · Formulas: Formulas and XLOOKUPs described in plain English, explained, and hand-checked on one row.

4. LO1 · PivotTables and charts: PivotTables, PivotCharts and refined charts, each tied to a SUM or SUMIFS total.

© Tertiary Infotech Academy Pte Ltd

TOPIC 02

Skills and Rules

Personalisation · workbook rules on a .Rules sheet · built-in chart and theme skills · custom skills in SKILL.md · using Copilot to write a skill · Pareto charts

© Tertiary Infotech Academy Pte Ltd

Key Concepts — Skills and Rules

1

Personalisation = you

Preferences that follow you to every workbook, e.g. 'Never merge cells'. Settings (…) > Personalization.

2

Rules = this workbook

A visible sheet named .Rules with one rule per cell in column A. The rules travel with the file.

3

Skills = a repeatable recipe

Saved step-by-step instructions you call by name with @, in any workbook.

4

Start with built-in skills

@chart-design plots a chart from a prompt; @theme-design gives the whole workbook one look.

5

Let Copilot write your skill

Describe the task to Copilot on the web; it writes the SKILL.md. Upload it to its own OneDrive folder, then Refresh in Excel.

6

Still check the result

Rules and skills guide Copilot. They do not guarantee the numbers are right.

© Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Skills and Rules

Lab 4

- **Workbook Rules & Personalisation**

– Clean Messy Client Orders with Cleanup, Personalisation and Rules

Lab 5

- **Built-in Skills: Visual Design**

– Plot and Style Client Growth Charts with Built-in Visual Skills

Lab 6

- **Custom Skills: Pareto Chart**

– Use Copilot to Build a Custom Pareto-Chart Skill

© Tertiary Infotech Academy Pte Ltd

Personalisation: Preferences That Follow You

WHAT IT IS

- Your own preferences for Copilot, applied in every workbook. Settings (…) > Personalization.

WHY IT MATTERS

- Say a correction once instead of in every prompt. A prompt that asks for something else still wins.

CHECK IT

- Start a New chat, then check a new chart or table follows your preferences.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Personalisation: Preferences That Follow You

ADD THESE PREFERENCES

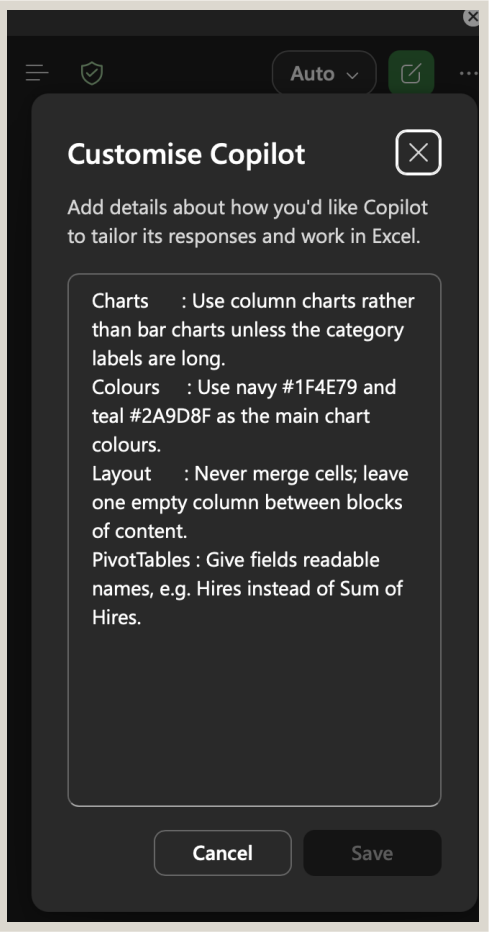

- Use column charts rather than bar charts unless labels are long.
- Use navy #1F4E79 and teal #2A9D8F as the main chart colours.
- Never merge cells.
- Give PivotTable fields readable names, e.g. Hires.

THEN CHECK

- Saved to your account, not the file.
- New chats follow them.

© Tertiary Infotech Academy Pte Ltd

Personalization in Copilot

1 **Settings (...) > Personalization**
Opens Customise Copilot.

2 **One preference per line**
Charts, colours, layout and PivotTable field names.

3 **Save, then New chat**
The preferences now apply in every workbook you open.

© Tertiary Infotech Academy Pte Ltd

Workbook Rules: The .Rules Sheet

WHAT IT IS

- A visible sheet named .Rules, one rule per cell in column A. Copilot follows it in this workbook.

WHY IT MATTERS

- Short prompts, consistent results - and anyone who opens the file gets the same rules.

CHECK IT

- Give a one-line prompt and check the result follows every rule.

© Tertiary Infotech Academy Pte Ltd

How .Rules Works

1

+ > Create workbook rules adds a sheet named .Rules with starter rules.

2

Write one rule per cell in column A, under ## headings, with an example.

3

On every prompt in this file, Copilot reads the visible .Rules sheet first.

4

Your short prompt + the rules = the same result every time.

5

Share the file: the rules travel with it - no setup for colleagues.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Workbook Rules: The .Rules Sheet

TYPE THIS IN COPILOT

- + > Create workbook rules (adds the .Rules sheet).
- Status must be one of: Open, In Progress, On Hold, Completed, Cancelled. WIP = In Progress.
- Create Orders_Clean with a clean copy of Orders_Raw, following the workbook rules.

THEN CHECK

- Exactly 5 statuses and 5 regions.
- A hidden .Rules sheet is ignored.

© Tertiary Infotech Academy Pte Ltd

Personalization vs .Rules vs Skills

	Personalization	.Rules sheet	Skill
What it is	Your preferences for how Copilot works	Guidelines for one workbook	A recipe for one repeatable task
Where it lives	Your Microsoft 365 account	A visible sheet named .Rules in the file	Built in, or SKILL.md in your OneDrive skills folder
Applies to	You, in every workbook, on any device	Anyone using Copilot in this workbook	Any workbook, when you call @name
Shared?	No - only you	Yes - it travels with the file	Only with people who install the same skill
Set up	Settings (...) > Personalization	+ > Create workbook rules	Manage plugins & skills; custom: OneDrive + Refresh
Best for	Formats, colours, tone you always want	Definitions, valid values, layout	Multi-step tasks repeated across files
Example	Use navy and teal for charts	WIP = In Progress	@pareto-chart Job_Category

© Tertiary Infotech Academy Pte Ltd

Personalization, Rules and Skills Compared

WHERE DOES IT GO?

- 'Always show currency as S$ with 2 decimals' → Personalization
- 'In this workbook, WIP means In Progress' → .Rules
- 'Plot a Pareto chart of any category column' → Skill
- 'Charts in this client report use the client's colours' → .Rules

REMEMBER

- Your prompt overrides Personalization.
- A hidden .Rules sheet is ignored.
- A custom skill works only once installed in OneDrive.

© Tertiary Infotech Academy Pte Ltd

Clean Messy Client Orders with Cleanup, Personalisation and Rules

LAB 4

BrightPath's order system exports client orders that several people typed by hand: 'WIP', 'in progress' and 'Ongoing' all mean In Progress, regions are written 23 ways and client names carry 'Pte Ltd' suffixes. You will save your own preferences in Personalization, try Copilot's automated cleanup, then create a .Rules sheet that defines the workbook's standards. With the rules in place, a one-line prompt builds a clean table, and the same rules shape the XLOOKUP and budget columns you add next.

You'll build

Your Personalization (saved to your account) and BrightPath_Client_Orders_Raw.xlsx with a .Rules sheet, a clean tblOrdersClean table (5 statuses, 5 regions, 12 clients), Rate, Delivered_Value, Budget_Used and Over_Budget columns, and a Checks sheet that proves the clean-up

1 Personalise	2 Automated cleanup	3 Create .Rules	4 Apply the rules	5 Rules + XLOOKUP

Tools: Excel · Copilot (Allow editing, Chat only) · Personalization · Clean data with Copilot · .Rules worksheet · XLOOKUP

© Tertiary Infotech Academy Pte Ltd

Sample Prompts — Lab 4

	PROMPT	WHAT IT DOES
1	**Create rules:** Create a .Rules worksheet based on the formatting already used in this workbook.	Copilot reads the workbook's current formats (dates, money, tables) and writes them as rules on a new .Rules sheet.
2	**Add a rule:** Add a rule to my .Rules worksheet that all charts should use navy #1F4E79 and teal #2A9D8F.	Adds one line to column A of .Rules; from now on every chart Copilot makes in this workbook uses those colours.
3	**Apply rules:** Create a new sheet Orders_Clean with a clean copy of Orders_Raw, following the workbook rules.	A one-line prompt is enough: Copilot reads .Rules and applies every rule - statuses, regions, client names, dates, money - to a clean copy.
4	**Find variants:** List the distinct values in Status and Region with counts, and group the ones that mean the same thing.	Lists each spelling with its count and groups variants such as WIP and In Progress, so you know what the rules must fix.
5	**Rules + lookup:** Add Rate from tblRateCard by Owner and Delivered_Value = Hours_Logged x Rate to tblOrdersClean.	Rate: =XLOOKUP([@Owner], tblRateCard[Owner], tblRateCard[Hourly_Rate]) finds the owner's rate. Delivered_Value: =[@Hours_Logged]*[@Rate], hours x rate.

© Tertiary Infotech Academy Pte Ltd

Check Your Results — Lab 4

1

Orders and distinct values (Checks B1:B4)

64 orders; 5 statuses, 5 regions, 12 clients

2

Status counts

Open 10, In Progress 24, On Hold 6, Completed 21, Cancelled 3

3

Paused orders

ORD-302 and ORD-303 are On Hold

4

Total budget (B6)

S$3,250,500

5

Delivered value and over budget (B7, B8)

S$1,961,030; 10 orders over budget

6

Sample ORD-326

358 h x S$115 = S$41,170 vs budget S$36,500 - Over_Budget Yes

© Tertiary Infotech Academy Pte Ltd

Built-in Skills: Chart Design and Theme Design

WHAT IT IS

- Ready-made skills you call with @: @chart-design plots the chart, @theme-design gives the workbook one look.

WHY IT MATTERS

- Expert chart and style choices in one line - you still direct the position and colours.

CHECK IT

- Reproduce every plotted number on a Checks sheet.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Built-in Skills: Chart Design and Theme Design

TYPE THIS IN COPILOT

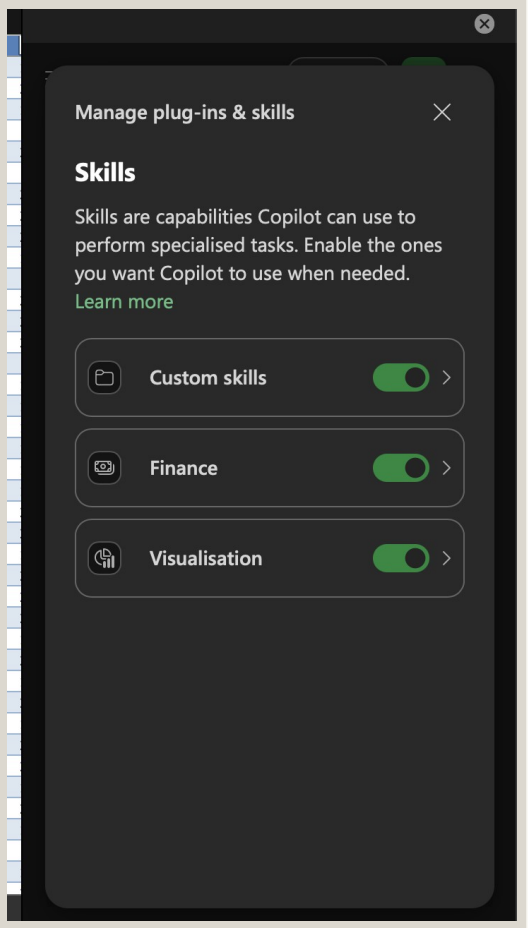

- @chart-design Create a combo chart of MRR and active clients by month, over A1:H18.
- @chart-design Recommend the best chart for new vs churned clients by month, then create it.
- @theme-design Apply one clean, professional theme to the Charts sheet.

THEN CHECK

- Four charts in a 2 x 2 grid, one clean style.
- Every chart matches the Checks sheet.

© Tertiary Infotech Academy Pte Ltd

Turning Built-in Skills On

1. **Settings (...) > Manage plugins & skills**
   Opens the Skills dialog.

2. **Visualisation > chart-design**
   Off by default - turn it on.

3. **Formatting > theme-design**
   Turn it on if the Formatting folder is shown.

4. **Type @ in the prompt box**
   An enabled skill appears in the list.

© Tertiary Infotech Academy Pte Ltd

Themes: One Look for the Whole Workbook

WHAT IT IS

- A theme is one set of colours, fonts and formats for cells, tables and charts. @theme-design applies it from a prompt.

WHY IT MATTERS

- The report looks like one piece, not four charts with four styles.

CHECK IT

- Style last, then confirm the values and formulas did not change.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Themes: One Look for the Whole Workbook

STYLE IT

- @theme-design Apply one clean, professional theme to the Charts and Checks sheets.
- @theme-design Use navy #1F4E79 and teal #2A9D8F as the main colours.
- @brandkit Apply our organisation's brand colours and fonts to the charts.

THEN CHECK

- All four charts share colours and fonts.
- The Checks values are unchanged.

© Tertiary Infotech Academy Pte Ltd

Plot and Style Client Growth Charts with Built-in Visual Skills

LAB 5

BrightPath's HR-outsourcing business sells monthly payroll and HR services to client companies, and leadership wants four clear charts of how it is growing. You will switch on the built-in visual skills in Manage plugins & skills, then call @chart-design to plot each chart - it picks the chart type and formats it using the Excel design team's guidance - and place all four in a 2 x 2 grid on a new Charts sheet. You will polish the set, ask Copilot for a Checks sheet that proves the numbers behind the charts, and finish with @theme-design to give the sheet one coordinated theme.

You'll build

BrightPath_HR_Outsourcing_Finance.xlsx with a Charts sheet of four skill-designed charts in a 2 x 2 grid (MRR and clients, new vs churned clients, H1 2026 spend by channel, active clients by plan), a Checks sheet that agrees with the charts, and one consistent theme

1 Manage skills	2 @chart-design: plot	3 @chart-design: polish	4 Check the numbers	5 @theme-design

Tools: Excel · Copilot (Allow editing, Chat only) · Manage plugins & skills · @chart-design · @theme-design

© Tertiary Infotech Academy Pte Ltd

Sample Prompts — Lab 5

	PROMPT	WHAT IT DOES
1	**Find skills:** Which skills do you have for charts and formatting? When would I use each one?	Chat only: Copilot lists the skills for charts and formatting and says when each one helps.
2	**Chart skill:** @chart-design Recommend the best chart for new vs churned clients by month, then create it.	Chart-design picks a chart type that compares the two series month by month, then draws it.
3	**Chart skill:** @chart-design Chart the sales and marketing spend for each Channel in H1 2026 as bars, longest first.	Totals the H1 2026 spend of each channel and draws bars, longest first - LinkedIn Ads (S$191,590) leads.
4	**Style skill:** @theme-design Apply a coordinated theme to this workbook.	Calls theme-design: one coordinated set of colours, fonts and formats for cells, tables and charts.
5	**Colours:** @theme-design Use navy #1F4E79 and teal #2A9D8F as the main colours on every chart.	Directs the theme with your own colours - navy for the main series, teal for comparisons.

© Tertiary Infotech Academy Pte Ltd

Check Your Results — Lab 5

1. **MRR and active clients, Jun 2026**
   S$482,200; 131 clients (Jan 2025 MRR S$238,200)

2. **New and churned clients, 18 months**
   98 new; 27 churned

3. **H1 2026 spend, longest and shortest bar**
   LinkedIn Ads S$191,590; Referral S$41,440

4. **H1 2026 spend, all channels**
   S$560,420

5. **Active clients by plan**
   56 + 49 + 26 = 131

6. **Charts sheet**
   Four charts in a 2 x 2 grid, one clean style, one theme

© Tertiary Infotech Academy Pte Ltd

Custom Skills: The SKILL.md Recipe

WHAT IT IS

- A SKILL.md file in its own OneDrive folder: name and description at the top, plain-English steps below.

WHY IT MATTERS

- Turns a long, repeated prompt into a one-line @mention that works in any workbook.

CHECK IT

- Folder name = name: line. Select Refresh after every change.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Custom Skills: The SKILL.md Recipe

SET IT UP

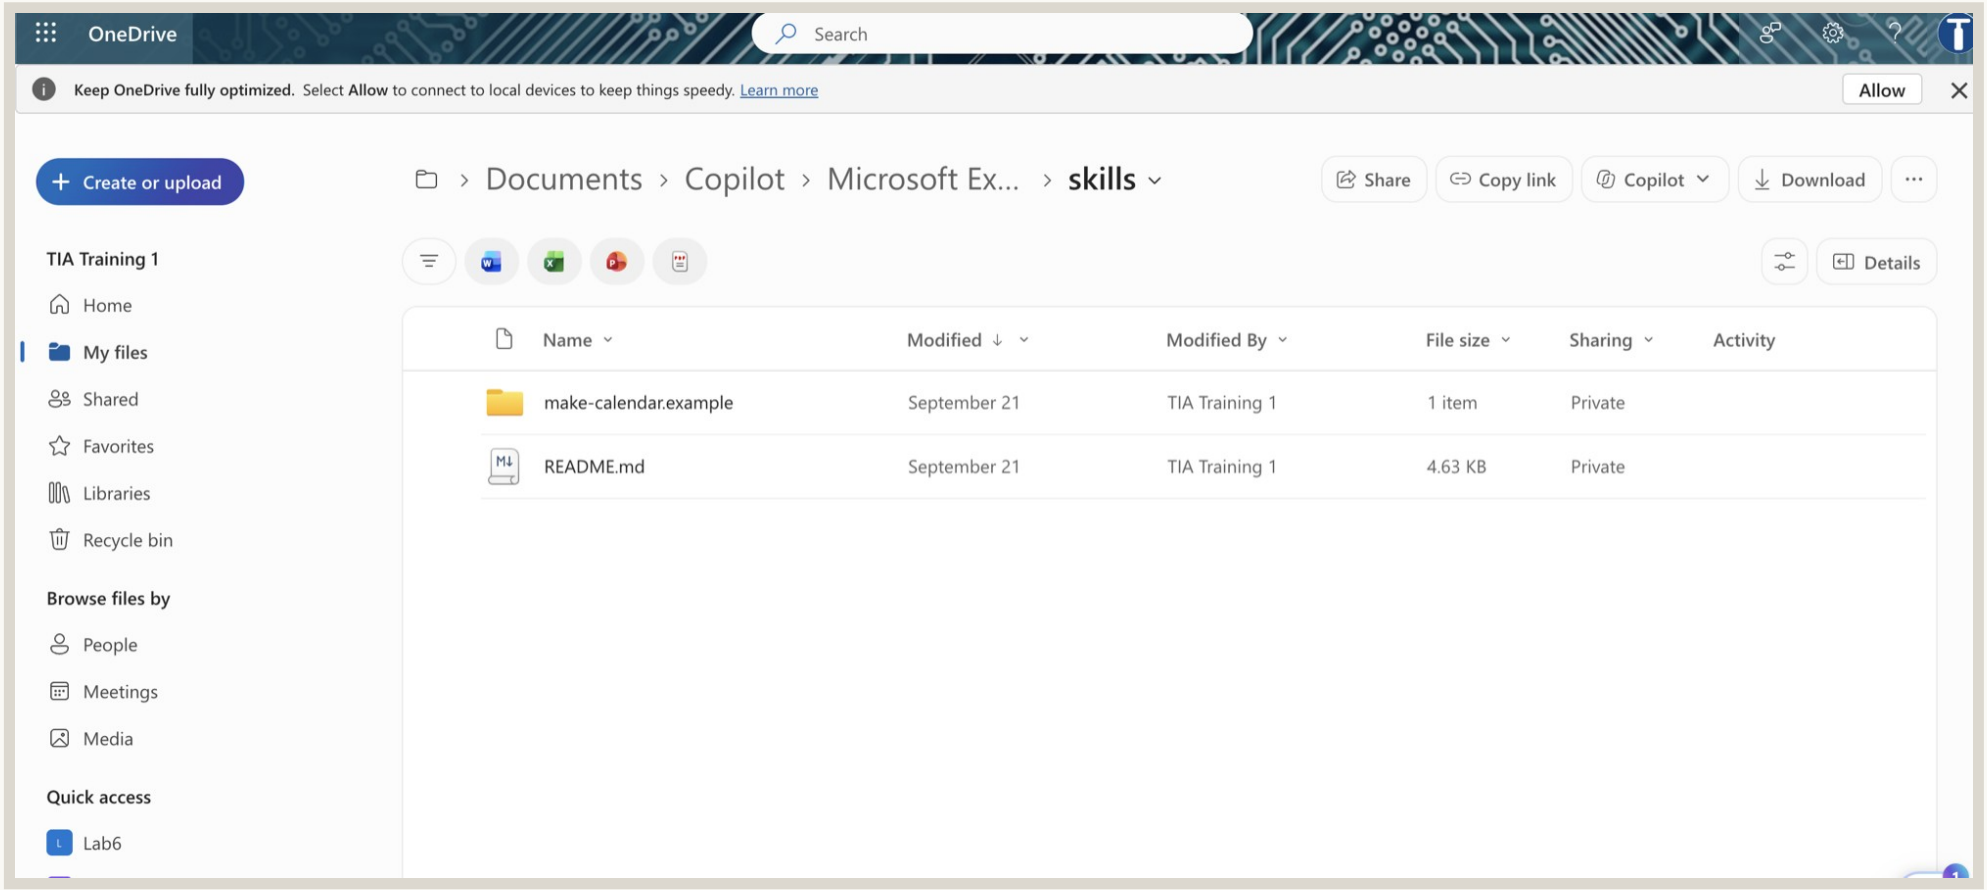

- … > Manage plugins & skills > Custom skills > Add in OneDrive.
- New folder: pareto-chart; upload SKILL.md into it.
- Custom skills > Refresh; turn the skill on.
- @pareto-chart Plot a Pareto chart of Job_Category in tblJobs.

THEN CHECK

- The skill appears when you type @.
- It runs from one line.

© Tertiary Infotech Academy Pte Ltd

Upload the Skill to OneDrive

OneDrive > Documents > Copilot > Microsoft Excel > skills. Create or upload > Folder: pareto-chart, then upload SKILL.md into it. The sample make-calendar.example shows the layout.

© Tertiary Infotech Academy Pte Ltd

Using Copilot to Write and Improve a Skill

WHAT IT IS

- Describe the task to Microsoft 365 Copilot on the web (copilot.cloud.microsoft) and it writes the whole SKILL.md for you.

WHY IT MATTERS

- No coding needed - and a skill gets better each time you add a correction to it.

CHECK IT

- Read every step before saving, and test the skill on a copy first.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Using Copilot to Write and Improve a Skill

TYPE THIS IN COPILOT

- Write a SKILL.md named pareto-chart that plots a Pareto chart, a different colour for each column.
- Return only the SKILL.md text, starting with the --- front matter.
- Update the skill so the chart also shows a dashed 80% line.

THEN CHECK

- 500 jobs, 16 categories; 6 reach 83%.
- A different colour for every column.

© Tertiary Infotech Academy Pte Ltd

Pareto Charts: Finding the Vital Few

WHAT IT IS

- Columns sorted high to low plus a cumulative % line: the few categories behind most of the total.

WHY IT MATTERS

- It tells you where to act first - the vital few - instead of spreading effort over every category.

CHECK IT

- The Count total equals the number of rows, and the line ends at 100%.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Pareto Charts: Finding the Vital Few

READ THE CHART

- @pareto-chart Plot a Pareto chart of Job_Category in tblJobs.
- Which job categories together make up 80% of the postings?
- Explain how to read this Pareto chart.

THEN CHECK

- Customer Service leads: 145 of 500 jobs.
- 6 of 16 categories reach 83%.

© Tertiary Infotech Academy Pte Ltd

Use Copilot to Build a Custom Pareto-Chart Skill

LAB 6

BrightPath received 500 job postings from clients in H1 2026, spread over 16 job categories. Which few categories make up most of the work? A Pareto chart answers that: bars sorted from highest to lowest and a cumulative % line that shows where the 'vital few' end. Excel's built-in Pareto chart paints every bar the same colour, so you will write a custom skill instead. You will ask Copilot on the web to write the pareto-chart SKILL.md, save it, upload it to your OneDrive skills folder, install it in Excel and call it with @ to plot the job categories - then reuse it on another column and improve it.

You'll build

A pareto-chart skill in your OneDrive skills folder, and BrightPath_Job_Postings.xlsx with a Pareto_Job_Category sheet and a Pareto_Client_Sector sheet - each a summary table and a Pareto chart with a different colour for every bar - plus a Checks sheet

1 Draft on the web	2 Save SKILL.md	3 Upload to OneDrive	4 Install in Excel	5 @pareto-chart

Tools: Microsoft 365 Copilot web (https://copilot.cloud.microsoft/) to draft the skill · OneDrive skills folder · Excel Copilot (Chat only, Allow editing) · SKILL.md

© Tertiary Infotech Academy Pte Ltd

Sample Prompts — Lab 6

	PROMPT	WHAT IT DOES
1	**Write a skill · Microsoft 365 Copilot web:** In the web chat at https://copilot.cloud.microsoft/, use the complete Step 2 prompt below to draft pareto-chart. It describes the table, columns and chart because the web chat cannot see your workbook.	Copilot on the web writes the whole pareto-chart SKILL.md. You save it and upload it to the OneDrive skills folder.
2	**Call the skill:** @pareto-chart Plot a Pareto chart of Job_Category in tblJobs.	Runs your skill: sorted counts, a cumulative % line and a different colour for each column - Customer Service (145 jobs) leads.
3	**Reuse:** @pareto-chart Plot a Pareto chart of Client_Sector in tblJobs.	The same skill on another column - no need to repeat the instructions.
4	**Check:** Add a Checks sheet with formulas that count all the jobs and the Customer Service jobs, so I can check the Pareto chart.	Copilot writes the check formulas: 500 jobs in all and 145 Customer Service jobs - they must match the chart.
5	**Vital few:** Which job categories together make up 80% of the postings? Show their combined share.	Adds up the shares until 80% is passed: the first six categories make up 83.0%.

© Tertiary Infotech Academy Pte Ltd

Check Your Results — Lab 6

1

Top category

Customer Service: 145 of 500 jobs (29.0%); 16 categories in all

2

Vital few

6 of 16 categories reach 83.0% (80% is passed at Nursing & Healthcare)

3

Pareto chart

Columns high to low, a different colour for each, cumulative % line 0-100% on a secondary axis

4

Client_Sector Pareto

Technology first (149 jobs, 29.8%); 4 sectors reach 80.8%

5

Improved skill

6 categories under 2% grouped into Other (29 jobs, 5.8%)

6

Skill

pareto-chart appears when you type @ and runs from a one-line prompt

© Tertiary Infotech Academy Pte Ltd

TOPIC RECAP

Recap - Skills and Rules

1. LO2 · Personalisation: Your own preferences, saved once in Settings and applied in every workbook.

2. LO2 · .Rules: One workbook's standards in a visible .Rules sheet, so a one-line prompt cleans the data.

3. LO2 · Built-in skills: @chart-design plots the charts and @theme-design gives them one look - checked against a Checks sheet.

4. LO2 · Custom skills: A pareto-chart SKILL.md written with Copilot, uploaded to OneDrive, installed and reused with one @mention.

© Tertiary Infotech Academy Pte Ltd

TOPIC 03

Interactive Dashboards with Copilot, Skills and Rules

What a skill is: reusable, installed in OneDrive · designing a highly visual dashboard · KPI definitions and style in .Rules · plan, build and polish with skills · slicers, timelines and refresh · a reusable dashboard skill · sharing people dashboards responsibly

© Tertiary Infotech Academy Pte Ltd

Key Concepts — Interactive Dashboards with Copilot, Skills and Rules

1

Define each KPI first

Write the formula in .Rules, e.g. Cost per hire = total sourcing cost / hires.

2

Put the standards in .Rules

KPI definitions, layout and colours in the rules keep the build prompt short.

3

Plan, then build

Plan mode shows the dashboard plan. Fix a wrong KPI before Copilot copies it into five charts.

4

Make it visual

KPI cards on top, charts in a grid, traffic-light colours, then @chart-design and @theme-design to polish.

5

Make it interactive

Slicers and a timeline filter every PivotTable and chart at once, and the KPI cards must follow.

6

Make it repeatable and safe

Save the recipe as a skill, test refresh with new rows, and hide groups under 5 people.

© Tertiary Infotech Academy Pte Ltd

WHAT YOU'LL DO

Hands-On Labs — Interactive Dashboards with Copilot, Skills and Rules

Lab 7

- **Interactive Dashboard**
  - Build an Interactive Recruitment Dashboard with Rules and Skills

Lab 8

- **Dashboard Skill, Refresh & Share**
  - Turn the Dashboard into a Reusable Skill, Refresh It and Share It Safely

© Tertiary Infotech Academy Pte Ltd

What Is a Skill?

WHAT IT IS

- A reusable recipe Copilot runs from one @mention in any workbook. A custom skill must be installed in OneDrive.

WHY IT MATTERS

- Write the steps once; every workbook and every month gets the same result.

CHECK IT

- Type @ in the prompt box: an installed, enabled skill appears in the list.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — What Is a Skill?

INSTALL A SKILL

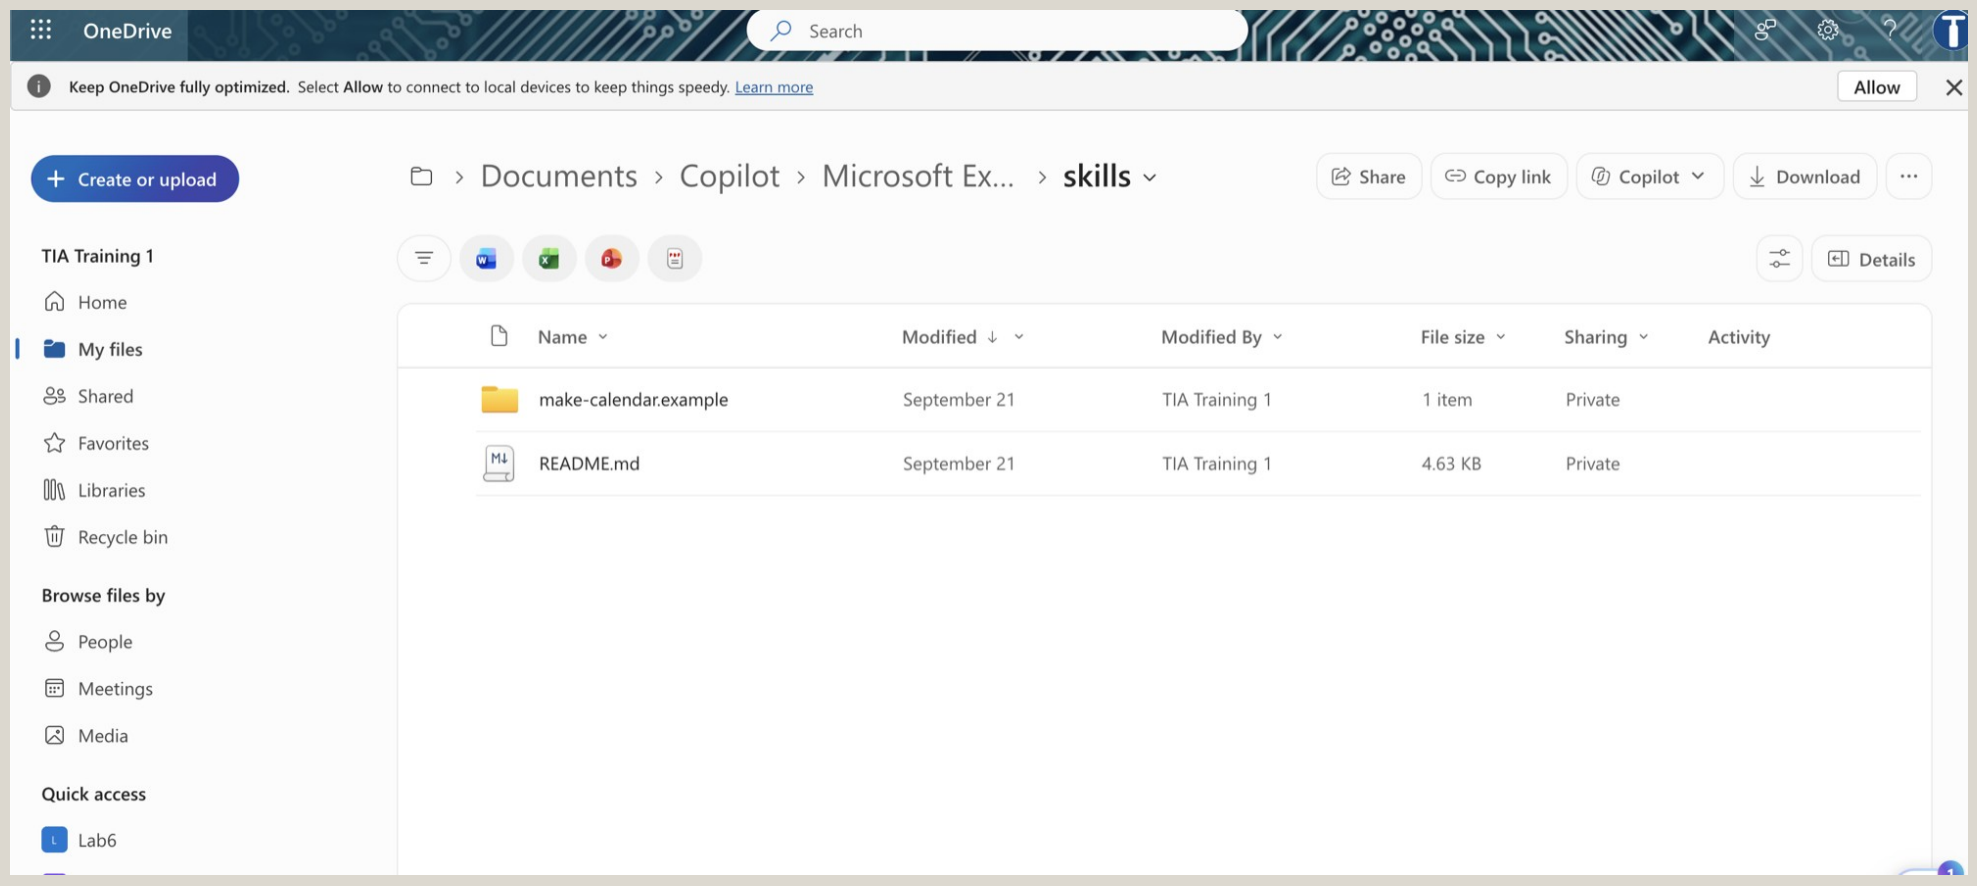

- Settings (…) > Manage plugins & skills > Custom skills > Add in OneDrive.
- OneDrive: skills > hr-workforce-dashboard > SKILL.md
- Refresh, turn the skill on, then type @hr in the prompt box.

THEN CHECK

- Folder name = the name: line.
- Workbook local; skill in OneDrive.

© Tertiary Infotech Academy Pte Ltd

Where Custom Skills Live

Excel reads custom skills only from OneDrive > Documents > Copilot > Microsoft Excel > skills - one folder per skill. The workbook itself can stay on your computer.

© Tertiary Infotech Academy Pte Ltd

Designing a Highly Visual Dashboard

WHAT IT IS

- One page: KPI cards on top, charts in a grid, slicers at the side, colour that signals status.

WHY IT MATTERS

- Leaders read it in seconds - if every KPI has one agreed definition.

CHECK IT

- Every KPI has a formula, a period, a target and an owner.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Designing a Highly Visual Dashboard

TYPE THIS IN COPILOT

- Suggest 5 KPIs for a recruitment dashboard using the columns in tblApps.
- Write Offer acceptance rate = accepted / (accepted + declined), excluding Pending.
- Suggest a layout and a 3-colour palette for a one-page dashboard.

THEN CHECK

- 4-6 headline KPIs, not 20.
- Definitions and colours go into .Rules.

© Tertiary Infotech Academy Pte Ltd

Plan and Build with Rules and Skills

WHAT IT IS

- Rules hold the definitions and style; Plan mode shows the build; skills polish the result.

WHY IT MATTERS

- Fix a wrong KPI in the plan before it is copied into five charts.

CHECK IT

- Click each KPI card: it should hold a formula, not a typed number.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Plan and Build with Rules and Skills

TYPE THIS IN COPILOT

- Plan mode: Build a one-page H1 2026 recruitment dashboard following the workbook rules.
- @chart-design Review every chart: finding-style titles and the rule colours.
- @theme-design Apply a modern theme that keeps the rule colours.

THEN CHECK

- The plan uses the rules' definitions.
- Each card matches the Checks sheet.

© Tertiary Infotech Academy Pte Ltd

Interactivity: Slicers, Timelines and KPI Cards

WHAT IT IS

- Slicers and a timeline filter every PivotTable, PivotChart and KPI card on the page at once.

WHY IT MATTERS

- Leaders answer their own 'what about…?' questions - if the page is wired correctly.

CHECK IT

- Test one slicer value and one date range against COUNTIFS, then clear them.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Interactivity: Slicers, Timelines and KPI Cards

TYPE THIS IN COPILOT

- Add slicers for Sector, Source and Recruiter and a timeline on Hire_Date, connected to every PivotTable.
- Link the KPI cards to the PivotTables with GETPIVOTDATA.
- Which objects did not change when I selected Technology?

THEN CHECK

- Technology: cards = COUNTIFS checks.
- Apr-Jun 2026 hires = COUNTIFS on Hire_Date.

© Tertiary Infotech Academy Pte Ltd

Build an Interactive Recruitment Dashboard with Rules and Skills

LAB 7

BrightPath's Head of Recruitment wants one page that shows H1 2026 applications, hires, offer acceptance, time to hire, cost per hire and hires against target, and can be filtered by sector, source, recruiter and date. You will put the KPI definitions, layout and colours in a .Rules sheet, so the build prompt stays short. Copilot plans the dashboard in Plan mode, builds it, then @chart-design and @theme-design make it look professional. Finally you prove that every KPI, slicer and the timeline give the right numbers.

You'll build

BrightPath_Recruitment_Dashboard_Data.xlsx with a .Rules sheet, a Checks sheet, PivotTables on Dash_Data and a Dashboard sheet with six formula-driven KPI cards (one with traffic-light colours), four PivotCharts, Sector, Source and Recruiter slicers and a Hire_Date timeline

1 Write .Rules	2 Build checks	3 Plan mode	4 Skills make it visual	5 Slice & verify

Tools: Excel · Copilot (Plan, Allow editing, Chat only) · .Rules · @chart-design · @theme-design · PivotCharts, slicers, timeline

© Tertiary Infotech Academy Pte Ltd

Sample Prompts — Lab 7

	PROMPT	WHAT IT DOES
1	**Plan:** Plan a recruitment dashboard following the workbook rules. Show me the plan first.	Plan mode: Copilot proposes the dashboard - KPI cards, charts, slicers - using the definitions in .Rules, and waits for your approval.
2	**KPI card:** Create a KPI card for Cost per hire linked to the PivotTable with GETPIVOTDATA, formatted as S$.	Reads the totals from the PivotTable with GETPIVOTDATA (sourcing cost / hires), so the card follows the slicers instead of showing a fixed number.
3	**Chart skill:** @chart-design Turn the hires-by-month chart into columns for hires and a line for Hire_Target.	Calls chart-design for a combo chart: hires as columns and the monthly target as a line, so each month is seen against target.
4	**Timeline:** Add a timeline on Hire_Date and connect it to every PivotTable on Dash_Data.	Adds a date slider for Hire_Date; connected to every PivotTable, it filters all charts and cards together.
5	**Visual cue:** Add data bars to the hires-by-recruiter table and traffic-light colours to the target card.	Data bars draw a bar inside each cell; traffic-light colours turn the target card green, amber or red by the % reached.

© Tertiary Infotech Academy Pte Ltd

Check Your Results — Lab 7

1. **Applications and hires**
   600 applications, 41 hires (no slicer selected)

2. **Offer acceptance rate**
   78.8% = 41 of 52; 10 pending excluded

3. **Time to hire, cost per hire**
   27.8 days; S$348.20

4. **Hires vs target (amber)**
   93.2% = 41 of 44

5. **Slicer: Sector = Technology**
   124 applications, 5 hires, 42.0 days

6. **Timeline: Apr-Jun 2026**
   22 hires; no KPI card holds a typed number

© Tertiary Infotech Academy Pte Ltd

Workforce Measures: Headcount, Attrition and Tenure

WHAT IT IS

- Headcount = active staff on a date. Attrition = exits / average headcount. Tenure = years since hire.

WHY IT MATTERS

- Small definition changes move the rate. Written in .Rules, every rebuild uses the same ones.

CHECK IT

- Average headcount = (opening + closing) / 2 - not closing only.

© Tertiary Infotech Academy Pte Ltd

The Formulas — Workforce Measures: Headcount, Attrition and Tenure

THE FORMULAS

- Headcount: =COUNTIFS(tblEmployees[Status],"Active")
- Average headcount = (opening + closing) / 2
- Attrition = exits in period / average headcount

THEN CHECK

- 29 / 223.5 = 13.0% attrition.
- No group under 5 people shown alone.

© Tertiary Infotech Academy Pte Ltd

A Reusable Dashboard Skill and the Refresh Test

WHAT IT IS

- Draft the dashboard SKILL.md at copilot.cloud.microsoft, install it in Excel, then prove the page refreshes.

WHY IT MATTERS

- Next month's dashboard takes one line - and a refresh test catches static pictures and typed numbers.

CHECK IT

- Add test rows, refresh all, and confirm each KPI moves by the expected amount.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — A Reusable Dashboard Skill and the Refresh Test

TYPE THIS IN COPILOT

- Microsoft 365 Copilot web: Write a SKILL.md named hr-workforce-dashboard using the full Lab 8 brief.
- @hr-workforce-dashboard Build the dashboard for the 12 months ending 2026-06-30.
- Append the 8 new joiners to tblEmployees and refresh all PivotTables.

THEN CHECK

- Active headcount 237 -> 245.
- Every chart updated.

© Tertiary Infotech Academy Pte Ltd

Sharing People Dashboards Responsibly

WHAT IT IS

- HR dashboards hold sensitive data. Share totals and averages, never individual records.

WHY IT MATTERS

- Anyone who can open the file sees everything in it, including hidden sheets.

CHECK IT

- No slicer combination shows a group of fewer than 5 people.

© Tertiary Infotech Academy Pte Ltd

Try It in Copilot — Sharing People Dashboards Responsibly

TYPE THIS IN COPILOT

- Which slicer combinations show fewer than 5 employees?
- List every element on this sheet that could identify a person.
- Write a 5-line leadership summary using only numbers on the dashboard.

THEN CHECK

- Privacy rule written in .Rules.
- Every number in the summary checked.

© Tertiary Infotech Academy Pte Ltd

Turn the Dashboard into a Reusable Skill, Refresh It and Share It Safely

LAB 8

BrightPath's HR Director needs the same kind of dashboard every month. Instead of repeating a long brief, you will ask Microsoft 365 Copilot at https://copilot.cloud.microsoft/ to write an hr-workforce-dashboard skill, save it to OneDrive and return to Excel to run it on the workforce workbook, whose .Rules sheet holds the period, the attrition definition and the privacy rule. Then you will append eight July joiners and refresh to prove the dashboard is live, check that no slicer combination exposes fewer than 5 people, and ask Copilot for a short leadership summary.

You'll build

An hr-workforce-dashboard skill in OneDrive, and BrightPath_Workforce_Headcount.xlsx with a .Rules sheet, helper columns, a Checks sheet and an HR_Dashboard with six KPI cards, four charts and Location and Job_Level slicers - refresh-tested and privacy-checked

1 Write .Rules	2 Draft skill on the web	3 Run skill in Excel	4 Refresh test	5 Privacy & summary

Tools: Microsoft 365 Copilot web (https://copilot.cloud.microsoft/) to draft the skill · Excel Copilot to run it · .Rules · PivotTables, slicers, refresh

Sample Prompts — Lab 8

	PROMPT	WHAT IT DOES
1	**Write a skill · Microsoft 365 Copilot web:** In the web chat at https://copilot.cloud.microsoft/, use the complete Step 3 prompt below to draft hr-workforce-dashboard. It includes the workbook schema and rules that this chat cannot see.	Copilot writes the dashboard recipe as a SKILL.md; its first step reads .Rules, so every run uses the same definitions.
2	**Run a skill:** @hr-workforce-dashboard Build the workforce dashboard for the 12 months ending 2026-06-30.	Runs the skill: helper columns, Checks sheet, PivotTables, KPI cards, charts and slicers - all from one line.
3	**Refresh:** I added rows to tblEmployees. Refresh all PivotTables and tell me which KPI values changed.	Refreshes every PivotTable after new rows were added and reports which KPIs moved, e.g. headcount 237 to 245.
4	**Privacy:** Which slicer combinations show a group of fewer than 5 employees? Suggest how to suppress them.	Finds filter combinations that would show fewer than 5 people, so you can hide or group them before sharing.
5	**Explain:** Explain how the Attrition rate card is calculated, step by step.	Explains the card's formula: exits in the period / ((opening + closing headcount) / 2) = 29 / 223.5 = 13.0%.

Check Your Results — Lab 8

1. **Active headcount**
   237 before the refresh

2. **Exits and attrition**
   29 exits (25 voluntary); 13.0% attrition

3. **Hires and tenure**
   56 hires; average tenure about 3.1 years

4. **Highest-attrition department**
   Recruitment: 21.8% (12 exits)

5. **Refresh test**
   After adding the July joiners: headcount 245, 428 rows

6. **Privacy**
   No Employee_ID, salary, individual record or group under 5 on the dashboard

TOPIC RECAP

Recap - Interactive Dashboards with Copilot, Skills and Rules

1. LO3 · Design: KPI definitions, layout and colours written in .Rules before anything is built.
2. LO3 · Build: Plan mode, then @chart-design and @theme-design; every KPI card matches the Checks sheet.
3. LO3 · Interact: Slicers, a timeline and GETPIVOTDATA cards tested against COUNTIFS.
4. LO3 · Reuse and share: A dashboard skill, a passing refresh test, and no group under 5 people on view.

LEARNING OUTCOMES

What You Achieved

1

Excel Fundamentals

Use Copilot in Excel's Chat only, Plan and Allow editing modes to prepare and clean data, write formulas and XLOOKUPs, and build PivotTables, PivotCharts and charts, verifying every result.

2

Skills & Rules

Make Copilot's work consistent and repeatable with personalisation, workbook rules (.Rules), built-in skills and custom skills that you create with Copilot.

3

Interactive Dashboard

Combine Copilot, rules and skills to build a highly visual, interactive and refreshable dashboard, and verify and share it responsibly.

© Tertiary Infotech Academy Pte Ltd

NEXT STEPS

Continue the Verified Workflow

1. Add your three most common corrections to Personalization.
2. Write a .Rules sheet for one workbook you use every month.
3. Turn one repeated report into a custom skill - let Copilot write the first draft.
4. Keep people decisions with accountable people: Copilot informs, it does not decide.

Keep Practising After the Course

1. Re-run the labs on your own machine — repetition is what makes the skills stick.
2. Apply the techniques to a real process or project in your own organisation.
3. Keep your downloaded C34 course files and use the lab checkpoints to restart safely.
4. Explore the follow-on courses at www.tertiarycourses.com.sg.

Thank You!

You can now use Copilot in Excel for the fundamentals, make its work repeatable with rules and skills, and build interactive dashboards - while keeping evidence, privacy and human judgement in control.
